Project Design Phase-II
Data Flow Diagram & User Stories

Date	29 October 2026
Team ID	N/A - individual project; no Team ID provided
Project Name	Electric Vehicle Market Performance & Insights
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	**External Entity**	A person, organization, or system outside the project that sends or receives data (e.g., Customer, Payment Gateway).
Rectangle with numbered header	**Process**	An activity that transforms incoming data into outgoing data (e.g., Validate Request, Process Order).
Rectangle (solid fill, no number)	**Data Store**	A place where data is held for later use (e.g., Customer Database, Inventory).
Labeled arrow	**Data Flow**	The movement of data between entities, processes, and data stores, labeled with what data is

		being passed.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Dashboard user	Explore categories	US-1	As a user, I can compare recorded sales by EV category.	Category chart displays all categories and sales aggregation clearly.	High	Dashboard
Dashboard user	Filter views	US-2	As a user, I can filter by market region, category, model year and battery type.	Relevant worksheets update when supported filters change.	High	Dashboard
Dashboard user	Compare manufacturers	US-3	As a user, I can compare recorded sales across manufacturers.	Treemap displays manufacturer areas by recorded sales with tooltip.	High	Dashboard
Dashboard user	Explore battery mix	US-4	As a user, I can view recorded sales by battery type.	Pie chart shows all five battery-type categories and labels.	Medium	Dashboard
Dashboard user	Inspect range and price	US-5	As a user, I can compare driving range, capacity and average price.	Scatter and dot plot use documented aggregations and axis labels.	Medium	Dashboard
Story viewer	Follow narrative	US-6	As a user, I can navigate the three story scenes.	Scenes cover Commercial Market Strategy, Global Manufacturing and Battery Performance.	High	Story
Web visitor	Open dashboard	US-7	As a visitor, I can view the published Tableau dashboard in the Flask website.	Embedded dashboard loads at the deployed page when Tableau is public.	High	Web
Web visitor	Open Story	US-8	As a visitor, I can view the published Tableau Story in the Flask website.	Story embed uses the published Story URL and can be navigated.	High	Web

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Web visitor	View KPIs	US-9	As a visitor, I can retrieve summary KPIs through the app endpoints.	API returns record count and documented numeric summaries.	Medium	Web/API
Project maintainer	Run locally	US-10	As a maintainer, I can install dependencies and start the Flask app.	README and requirements document the reproducible startup path.	Medium	Release
Project maintainer	Check data	US-11	As a maintainer, I can run SQL quality checks.	SQL pack has count, distinct-ID, negative-sales and nonpositive-range checks.	Medium	Data
Project maintainer	Review limitations	US-12	As a reviewer, I can identify dataset assumptions and limitations.	Documentation states the dataset is synthetic and imputed values are a limitation.	High	Docs

Note: Tableau Public uses the cleaned CSV file connection; SQLite is used for the SQL/database pipeline and Flask API access. This is not described as a direct live SQLite connection from Tableau.

Note: User stories are retrospective requirements mapped to the delivered prototype. User login, account registration, Facebook/Gmail authentication and email confirmation are not project features.
