Team ID	N/A - individual project; no Team ID provided
Project Name	Electric Vehicle Market Performance & Insights
Maximum Marks	5 Marks

The EV Market Intelligence dashboard combines descriptive synthetic-data comparisons in a consistent, light dashboard layout.

Activity 1: Interactive and visually appealing dashboards

The completed dashboard uses nine distinct views and shared filters. Its purpose is comparison and exploration, not prediction or verified real-world market measurement.

- Clear and Intuitive Layout: Primary category chart, customer-rating record bubbles and battery efficiency matrix are arranged above manufacturer share, model-year trend, battery mix and supporting comparisons.
- Use Appropriate Visualizations: Bar chart, treemap, packed bubbles, line chart, heat map, pie chart, filled map, scatter plot and dot plot are used for different analytic questions.
- Colour and Theming: Teal is used for category performance; the treemap and matrix use sequential colors, and battery type categories use a distinct legend.
- Interactive Filters and Slicers: Market Region, Category, Model Year and Battery Type filters are available; tests should confirm all intended worksheets respond.
- Drill-Down Capabilities: Tooltips provide additional detail; standard drill-down beyond the displayed fields is not claimed.
- Responsive Design: The Flask embed page uses responsive sizing; dashboard density may require scrolling at smaller display widths.
- Custom Visuals and Icons: Native Tableau marks and consistent titles are used; no unsupported custom icon pack is claimed.
- Use of Infographics: KPI/API values and visual comparisons summarize record count, recorded sales units, average range, price and customer rating.

Major outcomes from the synthetic sample:

Activity 2

Publish Dashboard on Tableau Public - actual shared view link:

Dashboard link is shown below.

https://public.tableau.com/views/SalesDashboard_17247660582000/Dashboard1?:language=en-US&publish=yes&:sid=&:redirect=auth&:display_count=n&:origin=viz_share_link

• Total cleaned records: 199,999 (37 columns; synthetic/procedurally generated records).

• Total recorded annual sales units: 1,558,703,498; use as a dataset aggregate, not verified industry sales.

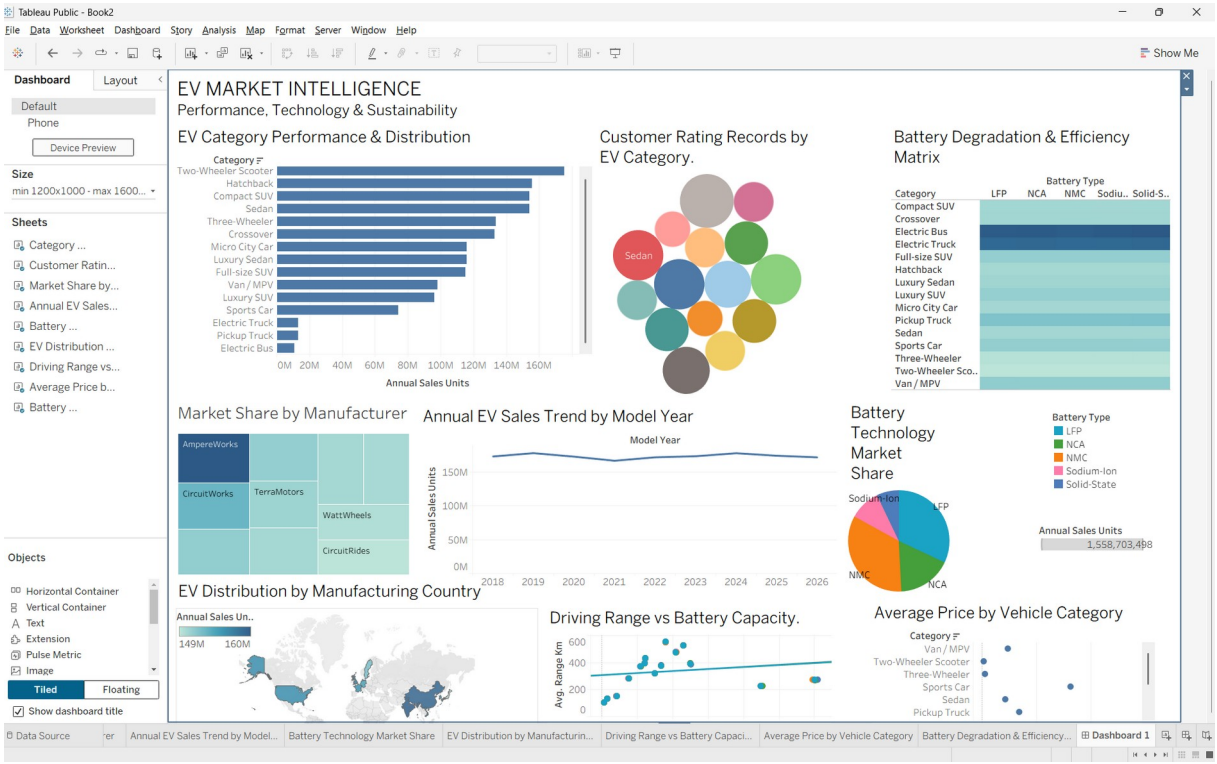

• Average driving range: 324.5 km; average price: USD 64,921; average customer rating: 4.09/5 in the cleaned sample.

• Two-Wheeler Scooter has the largest category total (175,389,726); AmpereWorks has the highest manufacturer total (9,504,546).

• Four dashboard filters are present: Market Region, Category, Model Year and Battery Type; workbook tab labels and the actual public view should be checked before final submission.
