Team ID	N/A - individual project; no Team ID provided
Project Name	Electric Vehicle Market Performance & Insights
Maximum Marks	5 Marks

This Tableau Story sequences the same synthetic dataset into three decision-oriented scenes.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Story scenes and observations:

- Scene 1 - Commercial Market Strategy: compare category sales, manufacturer totals and customer-rating record counts. These are sample patterns, not profit metrics.
-
- Scene 2 - Global Manufacturing: compare manufacturing-country distribution and recorded sales by country. Country rankings describe generated records, not verified production.
- Scene 3 - Battery Performance: compare battery technology, degradation/efficiency matrix, range versus capacity and category-level price.

Activity 2:

Three-Scene Narrative

Scene	Purpose	Views / Focus	Narrative caution
1. Commercial Market Strategy	Help compare recorded category demand, manufacturers and customer-rating record volumes.	Category performance bar chart; manufacturer treemap; customer rating record bubble view.	Bubble area is count of rating records; no profit data is inferred.
2. Global Manufacturing	Explore geographical distribution of manufacturing-country records and recorded totals.	Filled map by manufacturing country; regional and country comparisons.	The data is synthetic; geography is illustrative, not validated production data.
3. Battery Performance	Compare technology mix and vehicle attributes useful for follow-up analysis.	Battery mix pie; degradation/efficiency matrix; range-capacity scatter; average price dot plot.	Comparisons are descriptive; no causal or sustainability claim is established.
