Project Development Phase
Performance Test

Date	29 October 2026
Team ID	N/A - individual project; no Team ID provided
Project Name	Electric Vehicle Market Performance & Insights
Maximum Marks	

Project Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1	Data Rendered	199,999 cleaned records; 37 columns. Dataset size: cleaned CSV about 57 MB; SQLite DB about 73 MB. Tableau Public workbook uses the cleaned CSV connection.
2	Data Preprocessing	200,000 original rows; 1 exact duplicate row removed; 18,996 missing cells in five numeric columns imputed using column medians. No claim of user-based validation.
3	Utilization of Filters	Market Region, Category, Model Year and Battery Type. Filters were added in Tableau; record test results as visual/manual evidence. Formal interaction timings were not recorded.
4	Calculation fields Used	The build guide lists Sales (K), Price per KM of Range, Battery Capacity per 100 KM, High Customer Rating and Model Age. Verify which calculated fields remain in the final workbook before claiming all are used.
5	Dashboard design	9 distinct visualization types; light canvas and teal category performance; battery-type legend. Local screenshot shows the dashboard; formal timing and screen-size test matrix not recorded.
6	Story Design	3 scenes: Commercial Market Strategy, Global Manufacturing, Battery Performance. Public Story URL supplied; external embed and scene navigation should be verified at submission.

Note: Antigravity previously reported 5/5 local Flask route checks passing. This is not a recorded Tableau render-time measurement. Do not invent query history or millisecond performance numbers.
